

MillVantage™

YOUR NEEDS

Forest resource managers, timberland investors, and forest industry and bio-energy investors often need current information on forest products facilities for specific geographic areas of interest. To analyze wood markets for current or potential land holdings or assess resource availability for forest products facilities, reliable data on the location, status, consumption and types of mills are critical. Yet compiling and updating these data can take time and valuable GIS and data analyst resources.

SOLUTIONS WITH MILLVANTAGE™

To assist resource managers and investors in accessing and managing forest products facilities data, Sewall and Forisk have teamed together to offer MillVantage™, an interactive geodatabase of current information on wood-using mills. MillVantage provides geospatial data, mapping and applications for analyzing data on facilities that consume forest raw materials, including traditional forest products facilities and wood-consuming bio-energy facilities. Current coverage includes the southeastern United States (AL, AR, FL, GA, LA, MS, NC, OK, SC, TN, TX and VA).

MillVantage is available both as an on-line subscription service, hosted on the Sewall GeoPower™ platform, or as a product for use with existing GIS software. Subscriptions include quarterly updates on mill-specific production and types of raw materials consumed.

FEATURES & BENEFITS

- Best available mill location & production information
- Fast, efficient access via the Web
- Cost-effective--no GIS software required
- Quarterly updates with subscription service
- Customizable queries & maps
- Downloadable shapefiles & CSV files for reporting
- Easily configured geodatabase for use with existing GIS

KEY ATTRIBUTES

With MillVantage, users customize queries to view specific maps and access information on:

- 📍 Mill name and location
- 📍 Mill type
- 📍 Mill status
- 📍 Products consumed
- 📍 Number of employees
- 📍 Capacity and consumption at stated capacity
